Asabix is a full circle software development company. We help other brands and startups to digitalize the ideas, improve the products, and reimagine the business using leading development technologies.

In the development of new projects, we use the Laravel framework. In addition, we have experience in providing technical support for web applications developed on the Symfony and Yii2 frameworks. Over 7 years of development, we have come to understand that the value and advantage of our work lie in the timely and high-quality delivery of solutions to our clients.

Our specialists have worked on projects in various fields, including finance, logistics, warehouse management, e-commerce, restaurant business (including food delivery), and automotive services. Our team is always ready to explore new opportunities and work in different industries.

We guarantee the quality of all services we offer!

+ Web development

Choose our team and get market-ready products that will work efficiently for your business. Improve your business with a web application and reach the widest possible audience.

+ Support & service

The Asabix team not only develops new ones but also supports and improves existing projects. If your product requires modernization, optimization, or technical support, we will be happy to help.

+ Development and integration of APIs

We will help to work out or connect API of the world-famous services, such as shipping, payment, and sales systems, etc. Enjoy the convenient decisions for your web and mobile applications.

+ Quality Assurance

Our QA team will investigate your project and find its weaknesses. Together we will make a quality product with no defects. Learn more about our offer by going on the Testing page.

+ UI/UX design

If you have no ideas for your website or app, just contact us! Our developers will create an attractive, intuitive, and convenient design for any of your needs.

+ Dedicated team

Hire a team of specialists for your project. This will increase the level of understanding of business tasks, allow you to independently communicate with employees, as well as define the tasks and goals of the product.

Choose the required solution

Dedicated team

- ✓ You receive your own remote IT department.
- ✓ You are able to determine the number of employees.
- ✓ You or your manager directly contacts and supervises the developers.
- ✓ Suitable for complex projects with a realization period of 6 months.

For those who appreciate the team's involvement in the project. Our developers are completely immersed in work, get acquainted with the product in detail, and are exclusively engaged in your project, without being distracted by other tasks.

Hourly wage

- ✓ You set the basic tasks and change or add new solutions during the work process.
- ✓ We record the work hours and bill an invoice for the spent time after the project approval (including all necessary reports).
- ✓ You don't need to provide documentation of the entire project, just a schematic concept is sufficient.
- ✓ Flexibility and ease of making changes.

Choose an hourly contract if you want to fully control all processes, test new solutions, and also make adjustments.

Fixed-price contract

- ✓ You provide us ready-made documentation or we develop it together.
- ✓ We approve the total price and terms of work.
- ✓ Our team is involved in development and provides all the source files to you.
- ✓ Everything that is not included in the agreement is paid separately.

This type of cooperation is ideal for those who already have a clear idea and vision of the final product, or possess a ready-made project and want to modify and improve it.

We work using the best technologies

Web application for real estate search in the UAE

Development and Support

During the development, five language versions of the website were implemented (Arabic, English, German, French, Spanish). The catalog includes a Google map with property markers available for sale, as well as a filtering function, a list of available properties, and other useful options. Upon selecting the appropriate option, the user can navigate to the property sale page, where they can thoroughly review the description, view photos, obtain information about the realtor, watch videos, and take a 3D tour of the property. For property owners and managers, a convenient administrative panel has been created, allowing them to update and add content.

Brands that we proud to work with

They trus us

Diana Banda

We worked together on the site <https://yaponahata.com/> The project seemed simple, but there were many additional requirements in the development process. The team coped with it. The guys work quickly, cope with any task. Experts quickly respond to requests. It was very important in my project. The team respects the deadlines and remain in close contact with the client.

Artem Shishkin

We worked with Asabix company on the development not of the simple project - the online constructor cooverbox.in.ua. The company did a mobile version and many other improvements. Also, together with Asabix we started and adapted the project under other market. The work is accurate “technical requirement - realization”, with an understanding of the matter, efficiency and steps towards to the client. I recommend to all.

Alexey Kapusta

Working with Asabix is absolutely pleased. For all time there were no problems at work. All of our site requirements have been implemented. The company will always suggest how to better approach a particular task. If you want to get a quality product within a specified time, contact Asabix.

Oleh Ladan

Been working with Asabix for a few months, been very happy with the service. Very quick at responding and providing great solutions. Would recommend for any project in Symfony, and with API. Tried others before, glad I found them sooner than later.
